1 Steps to publication

Before your work can appear on the publication server and in regional, national and international catalogues, three steps are necessary. (1) First of all, we require some information about the publication and about you as the author. (2) Then you need to upload the document to the server. (3) Finally, you must sign the declaration of consent and send it to us.

Step 1: Document details

This information is input and the document subsequently uploaded using an [input wizard](#) (German only). The following information is requested:

- Type of publication (thesis/dissertation) and language
- Title, subheading and translated titles
- Information on the authors
- Source (in the case of articles)
- Abstract (optional)
- Keywords (optional)
- Information on institutions
- Date of submission to the faculty, date of defence, names of supervisors and examiners

If you have any questions, please don't hesitate to get in touch with us at publikationsserver@ub.uni-leipzig.de.

Step 2: Upload the document

Once these details have been input, the document can be uploaded (also using the input wizard) and your contact details entered. We recommend that you remove your curriculum vitae from the document unless the applicable doctoral regulations stipulate otherwise. Remember that personal rights could also be violated in the preface, acknowledgement or dedication. We also recommend using the PDF file format for the document. Please also note the **Technical notes on creating PDF files**. Don't use password or copy protection to restrict access to the file.

If your publication is already available online, you can also send us the URL. The receipt of your document will be confirmed to you by email.

Step 3: Sign the consent form

Before your work can be published, we need a signed declaration of consent from you. The consent form for electronic publishing can be downloaded here:

- [Declaration of consent \(PDF, German\)](#)
- [Declaration of consent \(PDF, English\)](#)

Please send the completed, signed form to the following address:

Universitätsbibliothek Leipzig
Bereich Medienbearbeitung
Beethovenstrasse 6
04107 Leipzig

After your data has been processed and your declaration of consent received, your document will be published on Leipzig University's publication server. You will be notified of this by email.

2 Copyright information

1. Papers uploaded to the publication server must not violate German copyright law. This means that either you as the author have the right to reproduce and make it available to the public or that the usage rights must be obtained from the copyright owner. If you yourself are the copyright owner of a document that is to be uploaded to the publication server, you retain all exclusive rights of use. Since the publication server is not a publisher, you only grant us simple rights of use that are necessary to make your work publicly accessible. If you later assign them to a publisher for commercial exploitation, you must inform the publisher that your document has been published on the publication server.
2. If using already published works, copyright protection means that in most cases a publisher (or occasionally the copyright owner) needs to agree to republication on the internet and that this new use often has to be paid for via a copyright collecting agency (e.g. VG Wort). The mere digitization of an already published work (whether as text, image or sound) does not constitute a new, freely usable work, even if digitization is carried out by its creator.
3. Your publication on the server must not infringe any third-party copyright. As the author, you are responsible for ensuring that your work does not violate copyright.
4. Multimedia products: The copyright owner of multimedia products normally enjoys the same copyright protection as the copyright owner of pure text documents. If external materials (photos, texts, clip art, graphics, tables, music, videos, animations, etc.) are included, copyright and other rights pertaining to the materials must always be observed.

3 Technical notes on creating PDF files

Documents are published on the Leipzig University publication server using the PDF format. There are various conversion programs for creating PDF files. Many word processing programs can export files directly as PDF files. [PDF/A](#) is a special ISO-standardized PDF format for the long-term archiving of electronic documents. If your conversion program can create PDF/A files, please use this option to create your documents.
