Digital
High-level content

Low-level content (i.e. “data”)
The SMK API
The SMK API

The museum as platform
Radical openness
If we have it, we share it
Reach is the only KPI
* Only internal services are ever any good
smk.dk/api
TIFF Images uploaded to our DAM are converted to JPG2000

When a new artwork is added to our collection database it gets indexed automatically

The index process asks the DAM if it has anything on the item number

There is a IIIF manifest for each artwork in our API but not always an image
